

Summary of Qualifications: Senior Software Engineer with 10+ years of experience designing, modernizing, testing, and supporting enterprise applications across cloud, web, and distributed systems. Skilled in building scalable solutions with C#, .NET, Java, Python, AWS, Azure, and SQL-based technologies, with a strong focus on maintainability, reliability, security, and business value.

- Experienced in cloud-first modernization, legacy system refactoring, automated testing, production support, and CI/CD-driven delivery across AWS and Azure environments.
- Collaborative, self-directed engineer known for quickly learning new technologies, improving system reliability, reducing operational risk, and delivering practical solutions that support business outcomes.

Work Experience:

Sallie Mae Bank — Senior Software Engineer 2, January 2024 – Present; Senior Software Engineer, August 2018 – 2023

- Implemented new business features in an Agile environment, applying Test-Driven Development practices to deliver reliable, maintainable software.
- Refactored and optimized legacy code using dependency injection and established design patterns, reducing redundancy, improving workflow, and simplifying future enhancements.
- Designed, executed, and maintained Selenium WebDriver automated UI test cases to support regression testing and improve release confidence.
- Troubleshoot production issues, responded to operational service requests, and provided on-call support to maintain application stability.
- Implemented an AWS proof of concept to replace a legacy in-house email system using Amazon SES, S3, Lambda, and SQS.
- Enhanced security posture by moving hardcoded passwords and IDs from configuration files into Azure DevOps pipeline variables.
- Modernized business applications using a cloud-first approach aligned with enterprise technology standards.
- Modernized business applications using AI spec-driven development to translate business requirements into structured specifications, accelerate solution design, and improve alignment between engineering delivery and business outcomes.
- Promoted knowledge sharing and reduced team silos through peer programming, code reviews, and collaborative delivery practices.

Bible League International — Software Developer, October 2016 – October 2018

- Created financial reports to track donor-related income, improving financial insight and supporting campaign strategy.
- Maintained and enhanced the license and contract management system, including automated expiration reports for business stakeholders.
- Contributed to the rewrite of a legacy grant management system used for planning, creating, receiving, expensing, and tracking grant-related project metrics using C#, .NET, and MVC 5.
- Hosted applications across multiple Microsoft Azure regions to improve availability and end-user experience.
- Supported team collaboration through peer programming and code reviews.

NextGear Capital — Software Developer, June 2015 – October 2016

- Automated financial reporting processes for lender-facing reports, improving operational efficiency and reporting consistency.
- Supported modernization efforts by rewriting the dealer analytics engine used to calculate dealer KPIs using Scala, Spark SQL, and Hadoop.
- Contributed to a mobile-first modernization initiative by rebuilding the dealer performance system using Java, Angular, TypeScript, and RxJS.
- Strengthened engineering collaboration through peer programming, code reviews, and company-sponsored technical training.

Stratosphere Quality — Software Developer, December 2014 – June 2015

- Developed Azure-based microservices and integrated Twilio APIs to automate messaging between field inspectors and supervisors.
- Improved operational efficiency by developing a geocoding solution using Google's Geocoding API for factory locations, temp agency locations, and employee addresses.
- Created web services that enabled QA supervisors to identify field inspectors closest to job sites, reducing travel costs and improving profitability.
- Supported cloud migration initiatives by developing applications to orchestrate data flow between company servers and Microsoft Azure.

ITT Technical Institute — Software Developer, July 2013 – August 2014

- Implemented a solution for assigning and reassigning computers to students and faculty, improving computer inventory management.
- Created automated reports to track the status, count, and location of computers across 130+ campuses.
- Led the migration of a student-facing application from Java to C# and ASP.NET MVC as part of the organization's technology transition.
- Migrated multiple batch applications from Java to C#, improving alignment with the organization's target technology stack.

Technical Skills:

- **Languages/Frameworks:** C#, Java, Scala, TypeScript, Clojure Script, JavaScript, Python 3, Spark SQL, Impala, Hadoop, MSSQL, T-SQL, .NET Framework, .NET Core, Angular, Spring, Kendo UI, Entity Framework
- **Tools/Platforms:** Azure DevOps, TFS, Git, JIRA, SQL Server Reporting Services, Browser Stack, Selenium, Cucumber, AWS EC2, AWS S3, Amazon SES, Amazon SQS, AWS Fargate, Microsoft Azure, JUnit, NUnit, VS Code, Visual Studio, Sublime Text, Eclipse IDE etc.
- **AI/Modernization:** AI-assisted software development, AI spec-driven development, AI-assisted requirements analysis, prompt engineering, application modernization, requirements-to-specification translation

Education:

Indiana University Purdue University, Indianapolis, IN Major:
Computer Science, B.Sc.

Minor: Math

Certification:

Udacity - Machine Learning Engineer Program

Udacity – Hadoop and Map Reduce Certificate
